Semantic HTML

Proper File managed.

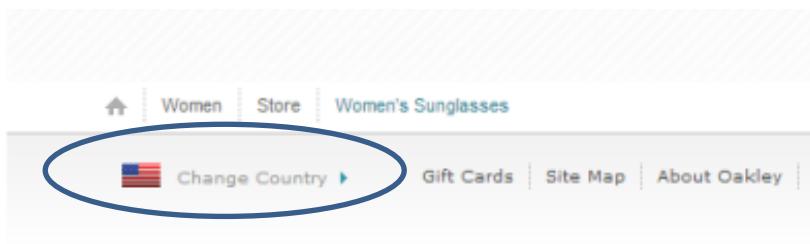

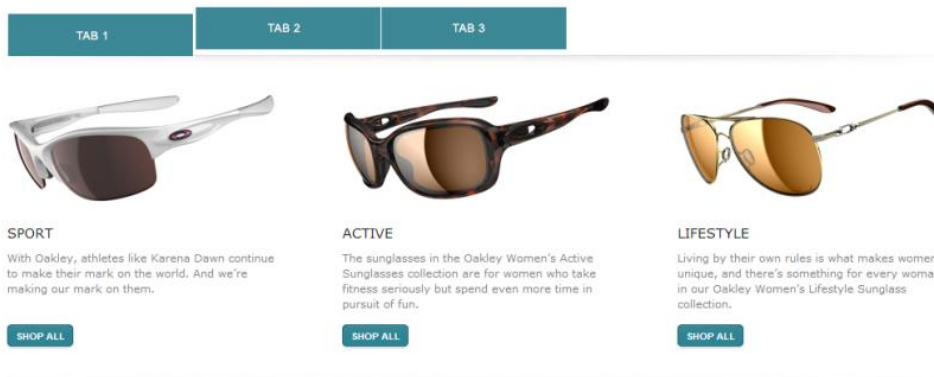

#### Banner:

1. Auto Slide banner
2. The picture slides from left to right and the text background above it slide from right to left and then after the text slides from left to right. It should be quick and still impress that not that quick.
3. The left and right arrow is for manual slide. When user clicks on any of the arrow the auto slide should stop and should function manually for the sliding of image.
4. When there is no more slides to right or left the arrow icon should be disable and have inactive arrow/ background should not have hover effect too.

## Tab Set

Tab 1 is in active state!

Country drop menu.

When Nepal is selected it also shows Nepal's Flag

By default is US flag but when US is selected it will again show US flag

Now you can keep

- 1) USA
- 2) Nepal
- 3) India

When user wants to add there must be easy ways to do add more country and flag but in HTML page only. Your JS should work accordingly no more script will be required to do so.
